

The Platinum Pro R35 GT-R

High Performance Fuel and Ignition ECU for

Nissan R35 GT-R

The next generation in engine management. Purpose built for Nissan's supercar, the Platinum Pro R35 GT-R ECU is a fully programmable ECU interfacing directly with all the standard Nissan sensors and on board computer systems, taking control of all the essential engine management tasks such as fuel delivery, ignition timing, boost levels, camshaft positioning and correction maps.

The Platinum Pro R35 GT-R ECU even interfaces with the factory Nissan CAN Bus for on board diagnostic and troubleshooting. The Platinum Pro R35 GT-R ECU unlocks the limitless potential of Nissan's VR Powerhouse.

Features:

- Sequential Fuel Control
- Direct Fire Ignition Control
- Variable Camshaft position mapping
- Knock Detection
- Engine Rev Limiter
- Closed loop boost control
- Launch control
- Closed loop wideband O2 control
- On board data logging
- Speed density, Alpha-N or MAF tuning
- Additional user definable inputs and outputs
- Windows Software

The Platinum Pro R35 GT-R kit includes:

ECU Programmable Computer, Plug and Play wiring Harness, USB Programming Cable, Instruction Manual (on CD), Programming software
